

Risk Levels Used in Human Health Criteria

*A Compilation of Human Health Risk Levels used to Calculate Surface Water Quality Criteria for Carcinogenic Chemicals**

Risk Level Terminology

Numeric	How to say it...	What it means, under specified exposure assumptions*
10^{-6}	Ten-to- the-minus-sixth	...risk of <i>one</i> additional occurrence of cancer, in <i>one million</i> people...
10^{-5}	Ten-to- the-minus-fifth	...risk of <i>one</i> additional occurrence of cancer, in <i>one hundred thousand</i> people...
10^{-4}	Ten-to- the-minus-fourth	...risk of <i>one</i> additional occurrence of cancer, in <i>ten thousand</i> people...
<p><i>*What are the exposure assumptions that are included in Washington's current human health-based criteria (the 1992 National Toxics Rule criteria)?</i></p> <p>70 years of daily exposure to 6.5 g/day of fish and shellfish, and 2 liters/day of untreated surface waters, by a 154 lb. person.</p>
